

Write php script for the following tasks:

1. Display the following string:

Today I 'll learn expressions & control flow in PHP

Backslash \ is the escape character in php

In the previous class, I learned about “**variable scopes**”.

2. Declare a constant variable, and show its value and data type.

3. Use html and php to create the following table. Save the price values in variables;

Note: Use HTML table elements within the echo statement.

Product	price
Pen	9.45
Notebook	2
Sticker	10
